EXECUTIVE SUMMARY

Cambodia HARVEST is a five-and-a-half-year food security program focused on increasing incomes for 100,000 rural Cambodian households as part of the US government's Feed the Future and Global Climate Change initiatives. This is the program's 18th quarterly report and highlights major achievements and activities for the period of April to June 2015.

This quarter, Cambodia HARVEST began its final year of technical assistance, with all field activities scheduled to end in March 2016. At this stage, the program is on track to meet or exceed all of its targets, having already met many of them. To date, Cambodia HARVEST has worked with 96,000 households (roughly 14 percent of the population of the four target provinces) and has worked in 86 percent of the districts in these provinces.

Going forward, the program will not add new clients, instead focusing on continuing to provide technical assistance to its existing client base. To ensure all clients have completed field requirements by March, Cambodia HARVEST has begun graduating many farmers in rice, aquaculture, and horticulture. As such, the reach and scope of the program's activities will gradually scale down over the coming year.

Highlights this quarter include:

- Program-supported farmers and agribusinesses generated \$1 million in incremental sales.
- The last of 13,616 dry-season rice farmers harvested their fields, resulting in yield increases of 30 percent and income increases of 48 percent over baseline.
- 25,460 commercial horticulture and household vegetable farmers collectively increased their yields by 193 percent, resulting in income increases of 207 percent over baseline.
- Mobile kitchens have trained 121,767 participants on nutrition and hygiene, exceeding the total program target of 117,477.
- Community-based savings funds provided 982 loans, many of them to poor households, worth \$60,593.
- Three rice seed cooperatives made \$44,875 in sales an increase of 322 percent over the previous season using storage facilities built with the technology fund.
- The government officially recognized the last of six watershed management committees established by the program, bringing an additional 813,968 hectares under improved management.
- Sixteen community forests graduated from the program.
- The government adopted two new natural resource management policies that will strengthen the country's capacity to protect and manage its globally significant biodiversity.

Food Availability Increased

Cambodia HARVEST is working to increase the availability of food to meet the daily dietary needs of Cambodians.

- 118,816 farmers applied new technologies or management practices, 99 percent of the total program target of 120,000.
- 45,080 hectares are under improved technologies or management practices, 98 percent of the total program target of 46,000.
- The number of underweight children under 5 years old has decreased by 31 percent due in large part to program nutrition and hygiene training, a 4 percent improvement over the previous quarter.

Increased Food Access through Rural Income Diversification

The program is strengthening the ability of Cambodians to generate income through economic activities to increase their capacity to purchase food.

- Cambodia HARVEST linked 10 new horticulture producer groups with 31 district- and provincial-level vegetable buyers this quarter, resulting in 406 metric tons of new sales worth \$160,073. To date, these linkages have resulted in 2,715 metric tons of new sales worth \$845,198.
- Incremental sales from farm-level rice, horticulture, and aquaculture totaled \$1 million this quarter, bringing the total to \$23.1 million, 83 percent of the program target of \$28 million.
- \$817,600 in incremental sales have been collected by 505 small- and medium-sized input suppliers this quarter, bringing the total to \$13.4 million, 112 percent of the total program target of \$12 million.

Natural Resource Management and Resilience to Climate Change

The program is working to protect the country's globally significant natural resources, which are an essential source of economic activity and food security for Cambodians.

- With the recognition of two new district watershed management committees by the government, an additional 300,000 hectares of land has been brought under improved management. To date, 1.2 million hectares have been brought under improved management, 126 percent of the total program target of 956,000 hectares.
- 36,318 people received training in natural resource management or biodiversity conservation, exceeding the total program target of 33,499.
- A mobile media campaign delivered global climate change and biodiversity conservation messages to 5,870 participants in 32 community forestry groups.

Capacity of Public, Private, and Civil Society to Address Food Security and Climate Change

Cambodia HARVEST is strengthening the capacity of Cambodians to manage and resolve challenges related to food security and global climate change.

- 44,618 stakeholders have increased their capacity to adapt to the effects of climate variability,
 98 percent of the total program target of 45,500.
- 12,677 agribusinesses and households received small-scale loans totaling \$12.8 million, 98 percent of the total program target of 13,000.

Overall Training and Technical Assistance

- Technical assistance extended to 96,271 rural households to date, 96 percent of the total program target of 100,000. Among these, 11 percent were extreme poor, 106 percent of the total program target of 10,000.
- To date, 281,853 people have received agriculture and food security training through demonstration sites, interactive field days, mobile kitchens, and one-on-one technical assistance, 99 percent of the 283,500 people targeted over the life of the program.

I. INTRODUCTION

I.I PROGRAM DESCRIPTION

Cambodia HARVEST develops sound, agriculture-focused solutions to poor productivity, postharvest losses, malnutrition, lack of market access, environmental degradation, and the effects of climate change on vulnerable rural populations. The program is based on an intensive extension methodology in which program technicians visit their client farmers every week to provide targeted, hands-on technical assistance. In this way, Cambodia HARVEST ensures its tens of thousands of rural clients not only see short-term gains, but also build the necessary skills and knowledge to continue succeeding long after the program is finished.

The overarching goals of Cambodia HARVEST are to improve food availability; increase food access through rural income diversification; improve natural resource management and resilience to climate change; and strengthen the capacity of the public and private sectors and civil society to address food security and climate change.

1.2 GEOGRAPHIC FOCUS

Cambodia HARVEST is working in 36 out of the 42 districts that make up the four target provinces. The program has provided technical assistance in 1,466 villages around the Tonle Sap Lake: 381 in Battambang, 367 in Pursat, 354 in Siem Reap, and 364 in Kampong Thom. Figure I shows the geographic dispersal of Cambodia HARVEST target communes. More detailed regional maps are included in Annex IV.

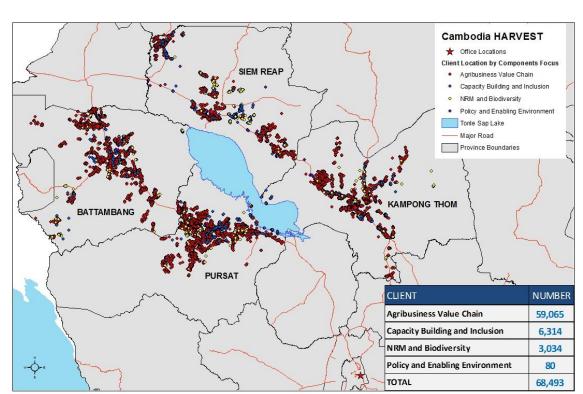

Figure I: Cambodia HARVEST Clients

1.3 CLIENT AND PARTNER PORTFOLIO

Because farmers are more likely to adopt new practices if they see the benefits firsthand, Cambodia HARVEST uses demonstration sites – established on client and lead client farms, households, or those of farmer groups or agribusinesses – to illustrate the effects of program techniques and technologies. To date, the program has directly worked with a total of 20,220 field demonstration clients (18,240 horticulture and rice; 1,654 aquaculture, hatchery, and cage culture; 144 schools; 63 health centers; and 119 forestry) and 662 partner clients (505 input suppliers; 49 rice millers; 77 commune councils; and 31 branches of nine microfinance institutions).

Definitions

- Lead demonstration client: A designated demonstration client who uses his/her plot to illustrate technology to other demonstration clients or beneficiaries within a village.
- **Demonstration client:** Farmers or individuals who demonstrate program techniques and technologies to nearby farmers under a co-investment agreement.
- Partner client: Communities or agribusinesses assisted by the program.
- Client (farmer) group: One lead demonstration client with a number of beneficiary farmers.
- **Producer group:** A number of farmers who come together as a group to leverage market options.
- Beneficiary: Farmers or individuals who receive indirect technical assistance from the program.
- Participants: Farmers or individuals who attend trainings.

1.4 IMPLEMENTING PARTNERS

Over the life of the program, Cambodia HARVEST has partnered with 21 field-based NGOs with 343 technicians to implement activities in horticulture, rice, forestry, aquaculture and fisheries, nutrition, and vocational skills training, as shown in Figure 2 below.

2. PROGRAM COMPONENTS

2.1 FOOD AVAILABILITY INCREASED

Cambodia HARVEST's work in this area focuses on enhancing agricultural input and production systems; introducing improved crop varieties and modern agricultural techniques; diversifying rural production systems; and strengthening the agricultural policy framework.

Agriculture Input and Production Systems Enhanced

- Remaining dry-season rice farmers harvest their fields. During this year's dry season, which ended in May, Cambodia HARVEST supported 13,616 rice demonstration clients and farmer beneficiaries. The remaining 3,911 of these farmers harvested their rice this quarter, resulting in yield increases for all dry-season farmers of 35 percent over baseline, from 2.3 tons per hectare to 3.1 tons. As a result, farmers saw average income increases of 48 percent, which equates to average farmer net incomes of \$456 per hectare per cycle. Overall, the dry-season harvest resulted in a production increase of approximately 10,893 metric tons of paddy, valued at more than \$2.7 million (averaging \$252 per metric ton). Clients and beneficiaries belong to farmer groups and receive Cambodia HARVEST technical assistance through 579 demonstration sites. Demonstration farmers saw the greatest yield increases, at 52 percent over baseline.
- Commercial horticulture farmers see yield and income gains. The program's 8,603 commercial horticulture clients and beneficiary households increased their yields by 198 percent this quarter, resulting in income gains of 218 percent. Client farmers saw average net incomes of \$925 per year on an average farm size of 1,300 square meters. Commercial horticulture farmers are increasing the availability of freshnutrient rich vegetables on the domestic market, lessening reliance on imports from Vietnam and Thailand. Cambodia HARVEST 4.229 currently working with demonstration clients and 4,374 beneficiary households who are adopting the program's techniques.

Photo by Cambodia HARVEST

Commercial horticulture clients in Pursat harvest their eggplant. Program clients increased their yields by 198 percent this quarter, resulting in income gains of 218 percent.

- Household vegetable clients strengthen food security. The program's 16,857 client and beneficiary household vegetable farmers increased their yields by 188 percent this quarter, improving food security and the availability of nutritious vegetables in their homes and villages. These farmers also sold excess crops to local buyers, resulting in income increases of 212 percent, which equates to an average farmer net income of \$98 per year on an average plot size of 200 square meters. After graduating 5,154 demonstration clients, the program is currently working with 4,910 demonstration clients who are implementing the program's techniques on small vegetable gardens, which are an average size of 200 square meters, designed to supplement household nutrition and food security.
- Vegetable nurseries increase supply of high-quality seed. Members of horticulture producer groups built four seedling nurseries this quarter, bringing the total built to date to I4. The nurseries, small enterprises established by members of I4 horticulture producer

groups, are supplying producer group members and non-program farmers with a consistent source of affordable, high-quality vegetable seedlings. As a result, customer farmers do not have to grow their own seedlings, saving them time and money and eliminating risk of failure. To date, the nurseries have generated total sales of \$9,189, resulting in profits of \$7,891.

Micro-gardens provide vegetables to poor families. The program has helped 465 households, many of whom are ID I and ID 2 poor, establish micro-gardens, allowing them to grow nutritious vegetables for home consumption despite owning little land. The plots are 10 square meters, 20 times smaller than the standard plot of 200 square meters used by household vegetable households **Participating** clients. attending a three-day horticulture training course that will educate them on the basic concepts they need to successfully grow vegetables. The small size of the microgardens allows poor families who lack household space - a common obstacle preventing them from participating as household vegetable demonstration clients -

Photo by Cambodia HARVEST

Villagers learn basic agronomy concepts in preparation for installing micro-gardens, which allow poor families who own little land to participate in vegetable growing.

to access nutritious vegetables. The vast majority of these clients are members of the program's food security and nutrition groups, whom the program consulted with closely in designing this activity.

- Fish farmers benefit from high-quality inputs from program hatcheries. The program's 12 client fish hatcheries have improved their productivity by 726 percent over baseline, helping to expand the supply of quality fingerlings available to Cambodian aquaculture farmers. As a result, these hatcheries have increased their incremental sales by 768 percent, generating \$39,916 in additional income over a baseline amount of \$5,194. Improving the production capacity and fingerling quality of fish hatcheries in Cambodia is a government priority, and it is essential for the expansion and long-term sustainability of the aquaculture sector.
- Aquaculture clients increase productivity. The program's 2,915 aquaculture clients and beneficiary farmers have seen yield increases of 95 percent and income increases of 76 percent over baseline, producing 18,770 tons of fish with a total market value of \$30.8 million. On average, clients consume 21 percent of the fish they raise, allowing them to supplement their diets with protein and save money on food purchases. Clients earn \$412 in average net income per pond cycle by selling fish that they do not consume. Clients who graduate from the program are equipped with new skills such as farm management and budgeting, which helps farmers plan better and minimize the risk of losses. The Cambodia HARVEST approach also utilizes existing farm infrastructure to increase productivity and production diversification, which ultimately results in increased food security.

Rural Production Systems Diversified

Household dietary diversity improves. This quarter, 11,692 people attended program nutrition training and field day events, bringing the total number of people who have received program nutrition training to date to 115,851. These activities have improved the dietary diversity of participants, according to the results of the most recent quarterly performance

monitoring survey. On average, the women of reproductive age surveyed eat from 5.7 of Feed the Future's nine food groups essential to dietary diversity – a number that remains unchanged from the previous quarter – a 24 percent increase over the baseline number of 4.6. Cambodia HARVEST's target is to reach an average of six food groups consumed.

Mobile kitchens spread nutrition messages in remote areas. The program's mobile kitchens trained 8,562 participants this quarter on nutrition and hygiene concepts. To date, the motorbike-pulled vendor carts, which are specially designed to reach remote rural areas, have trained 121,767 participants, 83 percent of

Photo by Cambodia HARVEST

The program's mobile kitchens have to date trained 121,767 participants on nutrition and hygiene, exceeding the total program target of 117,477.

them women, in 1,032 villages. The mobile kitchens have introduced growth monitoring, a technique for ensuring the health and proper development of children during the first 1,000 days of life. In target areas where growth monitoring has been introduced, the number of underweight children under 5 years old has decreased by 31 percent, from 7,838 to 5,446. The mobile kitchens have exceeded the target of reaching 117,477 participants over the life of the program.

Food security and nutrition groups offer financial training. The program's 218 food security and nutrition groups, which target poor households, initiated a new training course this quarter focused on basic financial literacy, including topics such as recordkeeping, pricing, and marketing. The objective of the training is to educate group members on concepts that will help them better manage their household budgets, existing micro-enterprises, or future money-making ventures. All 4,527 members of the food security and nutrition groups participated. Cambodia HARVEST created the food security and nutrition groups in order to recruit poor households as clients. Most of these households lack the land, financial resources, and household stability necessary to undertake the program's horticulture or agriculture activities. In a survey of 12,000 households that Cambodia HARVEST approached to recruit for horticulture activities, respondents gave the following reasons for not participating.

Reasons for Not Participating	ID I Poo	or	ID 2 Poor			
Lack of Land	1,732	31%	1,656	26%		
Migration	1,562	28%	1,824	29%		
Lack of Labor	1,094	19%	1,175	18%		
No Water Source	517	9%	663	10%		
Not Interested	495	9%	750	12%		
Other	247	4%	338	5%		
Total Responses	5,647	100%	6,406	100%		

The food security and nutrition groups have successfully attracted a greater number of extreme poor and poor households than other program activities, as seen in the table below.

Poverty Level	Males	Females	Total	%
ID I Poor	37	631	668	15%
ID 2 Poor	45	751	796	18%
Other	214	2,849	3,063	67%
Total	293	4,231	4,527	100%

Note: The Cambodian government classifies the poor using a number of criteria, such as home construction materials, economic assets, and means of transport. Using these criteria, households are categorized as ID I Poor, ID 2 Poor, or Other. When Cambodia HARVEST selects households for technical assistance, households show identification cards that reflect their classification.

• Community-based savings funds increase access to credit. The program's 146 savings funds, which are part of the community-based food security and nutrition groups, continued to fund microenterprise development by providing low-interest loans to contributing members. This quarter, the funds provided 982 loans worth \$60,593, bringing the total to date to 3,186 loans worth \$161,064, with an average loan size of approximately \$50. The funds have earned \$9,488 in interest on these loans, thereby increasing the value of their assets by 6 percent. The savings funds are composed of 2,598 people belonging to the program's food security and nutrition groups, village-based organizations that organize training and other activities in their local areas. Members have used the loans to fund rice cultivation and other agricultural activities, pig-raising and other livestock activities, medical care, micro-enterprise operations, and household food purchases, as seen in the table below.

Purpose of Loan	Loans to Date	Loans This Quarter	% of Loan this Quarter
Agricultural Activities (Rice, Vegetables, and Animal Raising)	1,593	491	50%
Micro-Enterprise Operations	532	164	17%
Medical Care	318	98	10%
Household Food Purchases	743	229	23%
Total	3,186	982	100%

Strengthen Policy Framework

■ Program makes progress and changes in policy work. Cambodia HARVEST made several advancements and alterations in its policy work this quarter. In the area of natural resource management, the government adopted the revised National Biodiversity Strategic and Action Plan, which will help Cambodia better manage and protect its globally significant biodiversity (see Section 2.3 for more detail). In addition, Cambodia HARVEST will undertake work on a new policy at the request of the government: developing the Protected Area Management Plan for the Central Cardamoms Protected Forest, a 402,000-hectare site that is home to globally significant biodiversity and is an important source of water for the Tonle Sap basin. Meanwhile, the Food and Agriculture

Organization (FAO) has taken on a segment of the Horticulture Strategic Development Plan. Cambodia HARVEST had initially placed this policy on its agenda, but in order to ensure that efforts were not duplicated, in addition to limited time remaining in the program, the policy has been cancelled. Cambodia HARVEST may review the results from FAO's assessment, once completed.

Note: Dates follow the fiscal calendar.

2.2 INCREASED FOOD ACCESS THROUGH RURAL INCOME DIVERSIFICATION

Cambodia HARVEST works to strengthen postharvest systems; improve market access and linkages to smallholders; expand rural employment generation; and increase investment in marketing infrastructure.

Postharvest Systems Strengthened

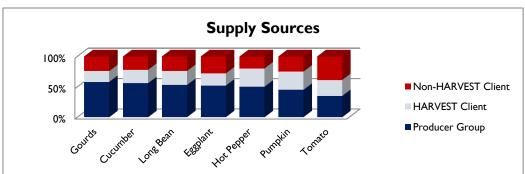

Producer groups help horticulture farmers maximize sales and incomes. The program's 77 horticulture producer groups continued to build relationships with vegetable buyers and coordinate their production cycles, resulting in increased sales and profits for the farmers and better market access for buyers and consumers. To date, the producer groups have generated 2,715 tons of new sales worth \$845,198. In addition. Cambodia HARVEST has linked partner producer groups with III districtand provincial-level buyers. This quarter, the program established 10 new producer groups with a total of 113 member farmers.

Photo by Cambodia HARVEST

A member of a producer group packs her Thai eggplants for sale in Siem Reap. With improved postharvest practices and better market linkages, producer groups have generated 2,715 tons of new sales worth \$845,198.

Producer groups strengthen market linkages with volume sales. Cambodia HARVEST introduces farmer groups to different buyers that seek large volumes of product per purchase, selling to both wholesalers and retailers. Survey data taken this quarter on the supply sources of the seven most in-demand crops shows that buyers purchase more crop volume from program producer groups than from program clients not belonging to producer groups and non-program farmers, as shown in the table below.

Gradually, Cambodia HARVEST is also seeing, based on quarterly surveys, that producer group members are expanding their production area due to strong product demand from buyers and provincial wholesalers, who recognize that Cambodia HARVEST product is high quality and less perishable than imported product due to minimal postharvest losses, good product classification, and freshness. Data taken from the target provinces shows that 23 percent of wholesaler requirements (an average of 4 metric tons/day) comes from within that province, as shown in the chart below. This percentage is divided almost 50/50, with program clients supplying approximately 12 percent, and 11 percent coming from other non-program farmers. The remaining 77 percent comes from outside the province: 69 percent from Phnom Penh (imported directly to Cambodian wholesalers from neighboring countries, with Vietnam the primary source for vegetables and Thailand for fruit) and an additional 8 percent from other provinces predominantly south of Phnom Penh.

- Public Private Alliance recipients begin activities. Cambodia HARVEST has Public Private Alliance partnerships with 11 agribusinesses worth a total of \$2.4 million. Through coinvestments, these businesses are installing equipment and participating in training designed to increase business and farmer productivity, improve overall product quality, lower operating and farming costs, and strengthen technical knowledge. This quarter:
 - o Rice mills: Seven small and medium-sized rice mills have installed equipment that produces rice of a higher quality, which in turn allows them to purchase more paddy, benefitting approximately 3,000 local farmers. In the past six months, the mills have purchased 20,268 metric tons of paddy with a value of \$4.8 million from 2,978 neighboring farmers. During the first half of this year, three of the seven partner rice mills have already surpassed their previous annual volume of paddy purchased, and the remaining four are highly likely to do so by the end of the year. Cambodia HARVEST's support for the rice mills focuses on improving processing and postharvest handling through co-investments in color sorters, mechanical dryers, and improved storage.
 - Input distributors: Three large agricultural input distributors have established a total of 249 vegetable and rice demonstration sites that are improving the skills and knowledge of farmers. In addition, one of the distributors is demonstrating mechanized techniques for no-tillage rice seeding on a pilot basis, while two of the distributors are developing production programs for melons and other high-value crops aimed at tourists and middle-income Cambodians. The partnerships with Asea Agri Group, Asia Irrigation, and Prum Bunthai Enterprises are increasing retail input supplier and vegetable farmer incomes by improving access to advanced technologies and agronomic advice, especially in the area of drip irrigation and use of soluble fertilizers.

- o Fish hatchery: Ratha Hatchery in Siem Reap has completed construction of new facilities and has begun producing fingerlings. With \$114,000 worth of new equipment and ponds, the hatchery will be able to produce 400,000 fingerlings per year, a 1,281 percent increase over its previous levels. This will provide seed stock for aquaculture farmers to grow at least 364 fish crop cycles, a 1,348 percent increase over baseline. The hatchery has undertaken tilapia spawning, with fingerlings expected to be ready for sale to farmers in August 2015.
- Rice seed cooperatives benefit from storage facilities. Three rice seed cooperatives continued to benefit from storage facilities built with support from Cambodia HARVEST's technology fund. The 45-ton facilities allow 344 member farmers to store their rice and sell it in the months following a harvest, when prices are higher and market conditions more favorable. During the current growing season, the farmers have made \$44,875 in sales, an increase of 322 percent over the previous season, a gain attributable almost exclusively to the new storage facilities. The cooperatives stored 102 tons of rice this season, nearly triple what they were able to store during the previous season.

Value of Incremental Sales Increased at Farm and Small- and Medium-Enterprise Level

- Value of incremental sales increased at the farm and enterprise level. Program horticulture, rice, and aquaculture clients saw incremental sales increase by \$1 million this quarter, bringing the total value of incremental sales increases to date to \$23.1 million, 83 percent of the total program target of \$28 million. To date, rice farmers have experienced incremental sales increases of \$16.5 million, horticulture farmers \$5.7 million, and aquaculture farmers \$906,650.
- Agribusinesses increase incremental sales. Agricultural input suppliers and small- and medium-sized rice mills reported incremental sales increases of \$817,600 this quarter, bringing the total amount to date to \$13.4 million, 112 percent of the total program target of \$12 million. The program's 505 client input suppliers have increased their revenues by 63 percent over baseline. Cambodia HARVEST is helping input suppliers improve the quality of goods and services available to local farmers and increase the incomes of families running these microenterprises. This quarter, client input suppliers made a range of improvements, with 15 of the shops installing horticulture demonstration plots in order to better educate their customers on their products and agricultural techniques.

2.3 NATURAL RESOURCE MANAGEMENT AND RESILIENCE TO CLIMATE CHANGE INCREASED

The program is working to enhance the enabling environment for sustainable resource management; improve environmental monitoring and management; and increase the economic benefits of natural resource management and conservation.

Enabling Environment for Sustainable Resource Management Enhanced

Community forests graduate and implement a range of activities. Sixteen community forests graduated from the program this quarter. In order to graduate, the communities completed a full package of technical assistance, including training on forest management plan development, boundary demarcation, and institutional strengthening toward completing the 11-step legalization process. In addition, the program's 30 community forests undertook a number of activities this quarter:

Sustainable harvesting practices: The program's 30 partner community forests have completed a training program silviculture and harvesting of sustainable forest first time such resources, the techniques have been introduced on a large scale in Cambodia. Eleven of these communities with significant forest resources began generating the harvesting of income from wooden poles and firewood this quarter. This activity will generate projected revenues of between \$400 and \$600 per hectare, with sales expected to be realized in the coming quarter. The communities will invest money in improved forest management and patrolling activities.

Photo by Cambodia HARVEST

Members of Prongil Community Forest in Pursat conduct an inventory training exercise. All 30 of the community forests supported by Cambodia HARVEST have reached at least step seven of 11 in the process of receiving legal recognition by the Forestry Administration.

- o Registration process: All 30 community forests supported by Cambodia HARVEST have now reached at least step seven of 11 in the process of receiving official legal recognition by the Forestry Administration, a critical milestone for these communities. In addition to legal and registration support, Cambodia HARVEST has provided technical assistance on forest fire management and risk reduction, global climate change, silviculture, and sustainable forest management. Reaching step seven is important because it gives the communities recognition of tenure at the national governmental level, allowing them to develop forest management plans, which is necessary for the commercialization of their forest resources.
- Reforestation planting: Six partner community forests that recently created 15-year management plans have begun preparing for plantings of commercial species. Sales of the species will fund the forestry monitoring and protection activities of these communities and will benefit 1,180 member households. In total, 33.5 hectares of degraded land were prepared for reforestation: 7.5 hectares with 3,000 seedlings of luxury tree species and 26 hectares with 10,400 seedlings of non-timber forest species. In coordination with the Forestry Administration, Cambodia HARVEST introduced new preparation techniques that will improve soil quality and the chances that these trees will survive.
- National event highlights non-timber forest sector. Cambodia HARVEST helped coordinate the country's first national forum on community-based non-timber forest product enterprises, generating significant interest in the nascent sector. The two-day event featured 50 enterprises from four value chains (bamboo, rattan, honey, and resin) and also showcased Cambodia HARVEST's enterprise development in bamboo and rattan sectors. Cambodia HARVEST presented on the program's non-timber forest product business model, which has improved the profitability of bamboo and rattan producer groups by 535 percent. Participants analyzed the policy challenges that currently hinder growth in the sector, and the program will present recommendations to overcome these at the next technical working group on forestry and reform in July.

• Community fisheries improve habitat and protection. The program's community fisheries made improvements this quarter designed to enhance fish spawning habitat and strengthen the protection of sanctuary areas. Four community fisheries in Siem Reap and Kampong Thom installed new boundary poles to demarcate fishing sanctuaries and placed tree stumps in strategic locations to improve aquatic habitats. In addition, 10 community fisheries installed conservation signboards designed to raise awareness about the importance of habitat protection.

Environmental Monitoring and Management Improved

- Government adopts important biodiversity policies. With significant support from Cambodia HARVEST, the government has adopted two new policy documents that will strengthen the country's capacity to protect and manage its globally significant biodiversity:
 - National Biodiversity Strategy and Action Plan: This policy sets out a country-wide approach to biodiversity that will ensure all government entities are working collaboratively to achieve agreed-upon goals. The document will ensure sustainable use of biological resources is a key part of the national decision-making process, including through all sectors of the national economy and policy-making framework. Cambodia is now among the first countries in the world to have such a policy, which is a requirement of signatories of the UN Convention on Biological Diversity.
 - National Biodiversity Status Report: This document provides a snapshot of the state of biodiversity in Cambodia for the first time since 2001. Cambodia HARVEST consultants helped build an index of what is and is not known about biodiversity in Cambodia across all taxa: mammals, birds, reptiles, amphibians, invertebrates, fish, mollusks, and crustaceans. The document formed the basis of the National Biodiversity Strategy and Action Plan and will be available publicly on the Ministry of Environment website.
- Camera traps assist in monitoring of endangered species. close ln coordination with the Forestry NGO Administration and partners, Cambodia HARVEST initiated the first largescale biodiversity monitoring program for the 402,000-hectare Central Cardamoms Protected Forest. Using 37 camera traps, the initiative will record globally vulnerable and endangered large mammals such as the Asian elephant, clouded leopard, and gaur, which are too elusive to monitor by direct observation. Training provided by the program is enabling forest rangers to implement biodiversity monitoring using new technologies such as camera traps to better understand and protect the site's globally significant biodiversity. Initial results

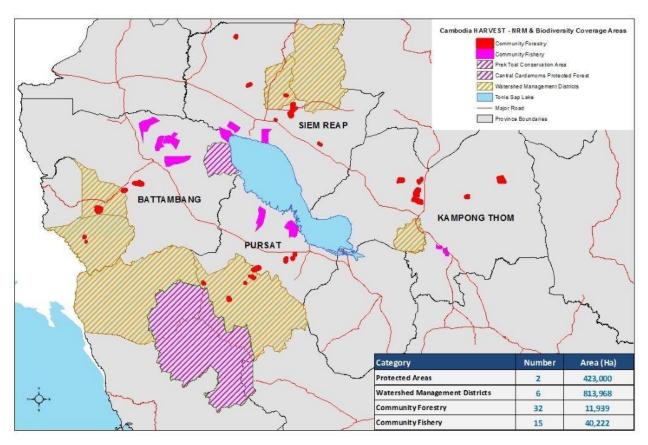

Photo by Cambodia HARVEST

An Asian elephant photographed by camera trap in the Central Cardamoms Protected Forest. Camera traps are helping rangers better understand and protect the site's globally significant biodiversity. The national population is thought to be 400-600 individuals.

are expected in August 2015 and will form the basis of long-term biodiversity monitoring at the Central Cardamoms Protected Forest, a framework for which will be included in the new five-year management plan for the site, which Cambodia HARVEST is also supporting.

- Watershed management committees receive government recognition. This quarter, the Cambodian government officially recognized the last of six watershed management committees established by Cambodia HARVEST. Watershed management committees are inter-agency government institutions that work to improve natural resource management, reduce climate change vulnerability, and conserve biodiversity. In total, the committees have brought 813,968 hectares of land of biological significance under improved management. All of the committees established by Cambodia HARVEST have developed watershed management plans of action that will be integrated into local district and commune development plans in the coming quarter. The plans will integrate watershed management priorities into government planning and will enable better allocation and leverage of government funds to improve catchment management in the Tonle Sap basin.
- Program increases land under improved natural resource management. Working with government and community partners, Cambodia HARVEST has to date brought 1.2 million hectares of land under improved management, 126 percent of the total program target of 956,000 hectares. The map below shows the program's natural resource management and biodiversity coverage areas in activities associated with watershed and protected area management and community forests.

2.4 CAPACITY OF PUBLIC, PRIVATE, & CIVIL SOCIETY TO ADDRESS FOOD SECURITY & CLIMATE CHANGE

Cambodia HARVEST works with local partners to increase the capacity of producer groups and private sector networks; enhance the capacity for adaptive research and extension; and establish the capacity for climate adaptation and mitigation.

Capacity of Producer Groups and Private Sector Networks Increased

• Farmers access affordable loans from partner microfinance institutions. With program assistance, 317 farmers and agribusinesses received loans worth \$375,000 this quarter. To date, 12,578 farmers have received loans worth \$11.4 million, and 99 agribusinesses have received loans worth \$1.4 million. Lack of access to credit hinders productivity in rural areas, impeding economic growth and food security. The following table breaks down by sector and farmer type the total \$11.4 million in credit received.

Demonstration Clients and Beneficiary Types	Number of Borrowers	Average Size of Loan	Total Value of Loans (Million)
Household Vegetable Plots	2,513	\$565	\$1.42
Commercial Horticulture Plots	1,402	\$1,291	\$1.81
Fish Ponds	743	\$1,171	\$0.87
Rice	7,920	\$923	\$7.31
Total Number of Farmers Receiving Loans	12,578	\$907	\$11.41
Total Number of Agribusinesses Receiving Loans	99	\$14,141	\$1.40
Total Number Of Farmers And Agribusinesses Receiving Loans	12,677	N/A	\$12.81

Capacity for Adaptive Research and Extension Enhanced

Provincial agriculture officials take part in exchange visit. As part of the program's

ongoing extension training course for four provincial departments of agriculture, participating officials took part in an exposure visit to Pursat, the third of four planned quarterly exchange visits. The program is training 27 provincial- and district-level agriculture officials to improve their ability to provide extension services to farmers.

Capacity for Climate Adaptation and Mitigation Established

Mobile campaign reaches forest communities. The program completed a mobile media campaign that delivered global climate change and biodiversity conservation messaging to 32 community forestry groups, reaching a total of 5,870 participants. These

Photo by Cambodia HARVEST

Children attend a mobile media campaign event. In total, 5,870 participants from 32 community forests attended the events, which educated villagers about global climate change and forestry conservation.

communities are in remote areas and were not exposed to the national broadcast media campaign conducted by the program last year. As part of the campaign, pickup trucks traveled to villages and set up portable cinemas that screened excerpts from short films and TV spots with climate change and biodiversity conservation themes. In addition, the mobile team disseminated posters and leaflets with similar themes.

Operations Support

Regional USAID project observes Cambodia HARVEST data systems. The USAID-funded Strengthening Partnerships, Results, and Innovations in Nutrition Globally (SPRING)

project conducted a 10-day field observation of Cambodia HARVEST's M&E and data collection methods. The objective of the research is to evaluate two value chain commodities – fish and long bean – to measure the percentage of total production reserved for home consumption by beneficiary producers. Cambodia, Bangladesh, and Malawi are the focus countries in this assessment.

- High-profile delegations tour program sites. Cambodia HARVEST hosted four highprofile site visits by Cambodian and US government officials. Field tours showcased program successes in agriculture, forestry, aquaculture, and nutrition:
 - The Office of the Council of Ministers and USAID Mission representatives toured field activities in Pursat, Battambang, and Siem Reap. The delegation observed the work the program is doing to improve natural resource management of community forests and fisheries, as well as activities that are strengthening the commercial horticulture, aquaculture, and rice value chains.
 - Officials from the national and provincial levels of the Forestry Administration visited Pneas and Banan community forests in Battambang to observe silviculture and reforestation activities.
 - Charles North, USAID's senior deputy assistant administrator for the Energy Environment Education Bureau, visited community forest, aquaculture, and commercial horticulture producer group activities in Siem Reap.
 - Susan Markham, USAID's senior coordinator for gender equality and women's empowerment, visited horticulture producers and nutrition activities that are benefitting women.

3. ACTIVITIES PLANNED FOR NEXT QUARTER

Food Availability Increased

- Continue wet-season rice activities for 1,500 clients, including 240 demonstration sites.
- Conduct postharvest training for 30 rice mill operators.
- Begin new horticulture extension training program for 20 provincial department of agriculture officials from four target provinces.
- Form 10 new commercial horticulture producer/marketing groups.
- Graduate 2,000 horticulture and 200 aquaculture clients.
- Hold GIZ/Cambodia HARVEST workshop in Siem Reap for biological control products.
- Support USAID-funded AVRDC workshop on seed package dissemination targeting malnutrition.
- Implement training on two new technologies, fish hauling tanks and fish grading screens, for all hatchery clients.
- Organize workshop for hatchery clients on producing male tilapia.
- Provide refresher training on farm planning and budgeting for hatchery clients to improve their marketing strength.
- Complete marketing survey of wild-capture fish value chain.
- Begin forming aquaculture producer groups.

Increased Food Access through Rural Income Diversification

 Implement eight-month contract extension for mobile kitchens, with deployment to 500 new villages in three provinces.

Natural Resource Management and Resilience to Climate Change

- Complete the final phase of reforestation of 33.5 hectares of degraded community forestry.
- Complete forest fire prevention awareness materials for 10 communities.
- Begin development of benefit-sharing mechanism and silviculture guidelines for Forestry Administration.
- Begin drafting new five-year management plan for Central Cardamoms Protected Forest, in coordination with the Forestry Administration and NGO partners.
- Complete first phase of new biodiversity monitoring program at Central Cardamoms Protected Forest.
- Complete watershed management program with integration of management plans of action from six districts into local government development and investment plans.
- Conduct natural resource management follow-up survey.

Capacity of Public, Private, and Civil Society to Address Food Security and Climate Change

- Implement mobile awareness campaign on global climate change and fisheries conservation in 15 community fisheries.
- Organize three-day field trip for 60 aquaculture students and faculty from three universities.

SNAPSHOT

New Awareness Comes to Community Forests

Media campaigns educate Cambodians on climate change and conservation.

Photo by Cambodia HARVEST

Children attend a mobile awareness campaign in Siem Reap. The initiative has educated nearly 2,000 people in 22 remote communities on global climate change and forestry conservation.

"We can't survive without the forest. It provides everything we need for life."

- Hem Sophal, member of Opong Rong Community Forest

Opong Rong Community Forest is on the front lines of climate change in Cambodia. Like all community forests, Opong Rong is home to hundreds of families that depend on – and protect – vital forestry resources. Decisions made here profoundly affect Cambodia's ability to mitigate and adapt to the effects of changing weather patterns.

But Opong Rong is remote, and knowledge there about climate change and forestry conservation remains limited. To address this, Cambodia HARVEST has implemented a multi-faceted awareness campaign that has taken key messages directly to community forests – along with key decision makers in local and national government.

One night in April 2015, a Cambodia HARVEST pickup truck pulled up to Opong Rong and set up a makeshift cinema: a large white sheet hung between coconut trees and a projector powered by a generator. Several hundred villagers gathered for the event, which featured popular Cambodian films interspersed with educational spots and interactive quizzes. This mobile campaign has educated nearly 2,000 people in 22 communities.

"As a result of events like this, we're much more aware of climate change and forestry conservation. We've changed our behavior," said Chhuong Bunchhorng, Opong Rong's community chief. Residents now more actively monitor harmful exploitation of forest resources, and they take greater care to prevent man-made fires that can wreak havoc in the dry season. Chhuong also attended a training course on climate change that has educated 114 key leaders, including government officials and school teachers.

Cambodia HARVEST is extending the messaging beyond community forests. The program recently completed a national media campaign that educated millions of Cambodians through TV and radio spots. For many, these broadcasts were their first exposure to the concept of global climate change. These campaigns have driven home the importance of protecting Cambodia's forests, which are essential to overcoming the effects of climate change.

"We can't survive without the forest. It provides everything we need for life," said Hem Sophal, a member of Opong Rong Community Forest.

With Non-Timber Products, Communities Spur Change

Bamboo and rattan protect forests and increase incomes.

Photo by Cambodia HARVEST

A bamboo clump at the Sek Sak demonstration site. Cambodia HARVEST has benefitted more than 2,600 households in more than 30 communities with its non-timber forest product activities.

"It protects the forest, and it's a great way to make money."

- Oum Phou, a bamboo demonstration dient

Beng Boeun knows firsthand the power of non-timber forest products. As the chief of Chipang Community Forest, Beng has seen how they have spurred the local economy – while also protecting vulnerable forest resources from threats such as economic land concessions, agriculture, and illegal logging. "Our objective is to protect the forest and the wildlife in it. Non-timber forest products help us do that," he said.

Since 2011, Cambodia HARVEST has promoted non-timber forest products in Chipang and other communities as part of a multipronged approach. These activities, which ended in early 2015, successfully increased household incomes while strengthening the raw material base that feeds the sector. In doing so, the program has increased incentives for communities to better manage and protect forest resources.

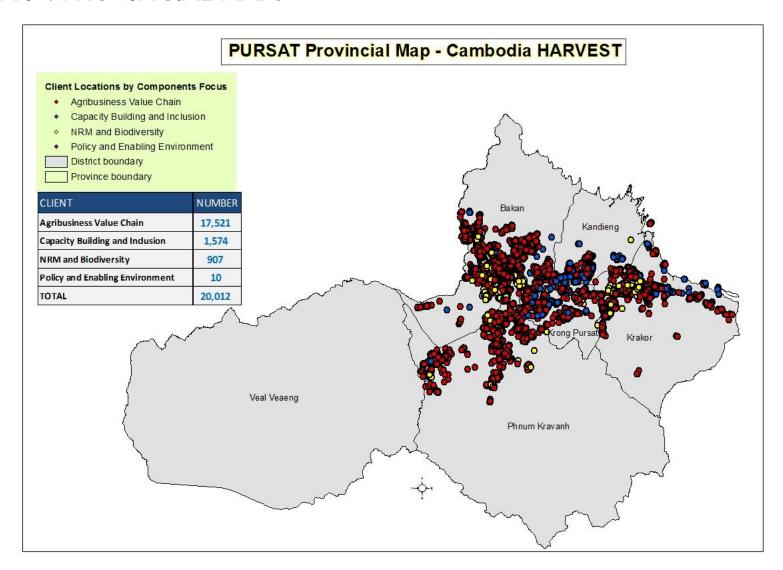

With assistance from Cambodia HARVEST, 69 producer groups who make furniture and other household products from bamboo and rattan increased their revenues by 430 percent, resulting in profit increases of 535 percent. These groups, made up mostly of women, have evolved from informal gatherings into small enterprises with business plans and marketing strategies.

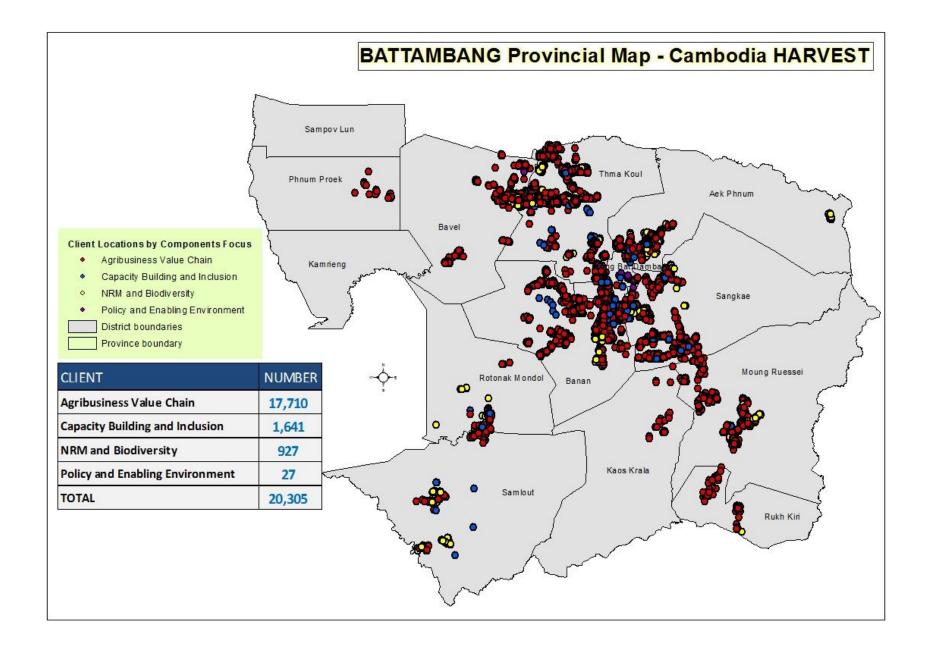

On the raw material side, the program has increased the supply of bamboo and rattan through improved nursery technologies and seedling propagation, large-scale commercial plantings, and community forest enrichment plantings in degraded areas. As a result, communities have more non-timber forest resources available to use on a sustainable basis, thus decreasing reliance on threatened tree species.

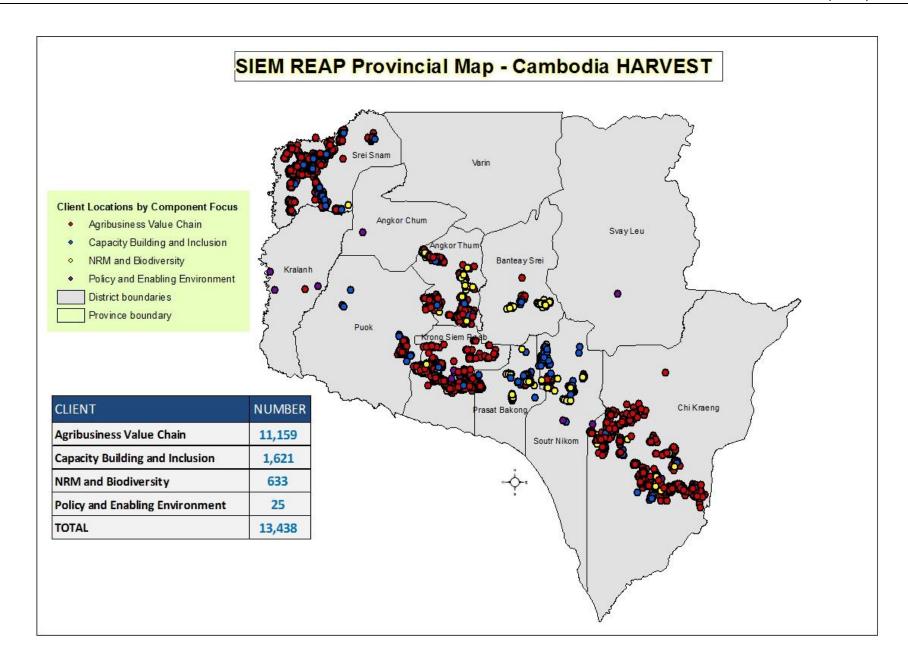

In total, these activities have benefitted more than 2,600 households in 30 communities. As a result of this success, a number of development organizations including GIZ, the Worldwide Fund for Nature, and the Food and Agriculture Organization, have adopted Cambodia HARVEST's approach. Oum Phou, a Cambodia HARVEST client, runs a bamboo demonstration site near Chipang that is teaching 14 families to grow the plant. He said bamboo is a win-win raw material for both community members and the environment. "It protects the forest, and it's a great way to make money," Oum said.
